Jharkhand, India

PROFESSIONAL SUMMARY

Frontend and Full-Stack Developer with practical experience designing and shipping responsive web applications. Proficient in React.js, JavaScript, Node.js, Spring Boot, and MySQL. Built REST APIs from scratch, constructed reusable component libraries, wired up JWT authentication flows, and tuned database schemas for performance. Focused on writing maintainable code, keeping UI interactions smooth, and shipping solutions that solve real user problems.

EXPERIENCE

Full Stack MERN Developer Intern

Jul 2021 – Sep 2021

Ardent Computech Pvt. Ltd., Kolkata, India

- Designed and delivered interactive, mobile-friendly web applications using **React.js**, **JavaScript**, **HTML5**, **CSS3**, **Node.js**, and **MySQL**, handling both frontend rendering and backend data flow.
- Architected a library of reusable UI components and connected them to REST APIs, cutting average page-load data-fetch time and improving consistency across the interface.
- Configured **JWT**-based authentication and route protection, ensuring only authorized users could access restricted resources.
- Wrote and optimized backend API endpoints and database schemas to support reliable CRUD operations under concurrent usage.
- Coordinated feature branches and pull requests through **Git/GitHub** within an agile team, participating in sprint planning and daily stand-ups.
- Refactored legacy code sections to eliminate redundancy, improve readability, and strengthen responsive behavior across screen sizes.

Tech Stack: React.js, JavaScript, Node.js, HTML5, CSS3, MySQL, REST APIs, JWT, Git/GitHub

Embedded Systems Intern

Jul 2024

C.V. Raman Global University, Bhubaneswar, India

- Programmed STM32 microcontrollers in **Embedded C** using HAL libraries to implement timer-driven and DAC-based signal generation modules.
- Verified signal accuracy and hardware stability by analyzing output waveforms on an oscilloscope, iterating on configurations until specifications were met.
- Documented peripheral configuration steps and test outcomes to support reproducible setup across different hardware units.

Tech Stack: STM32, Embedded C, HAL Libraries, Oscilloscope Testing

PROJECTS

Coverless Image Steganography

2024

Python, OpenCV, AWS S3, AWS Lambda

- Built a steganography pipeline that hides messages inside carrier images using SIFT and ORB feature extraction rather than pixel modification, making encoded images visually and statistically indistinguishable from originals.
- Implemented the core image-processing logic in **Python** with **OpenCV**, then integrated **AWS S3** for storage and **AWS Lambda** for serverless, on-demand processing.
- Work was accepted and published at **CoCoLe 2025**, validating the approach as a meaningful contribution to covert communication research.

FIR Management System

2025

Java, Spring Boot, MySQL, JWT

- Built a backend system for online FIR registration and real-time case tracking, replacing a manual paper-based workflow with a structured digital process.
- Developed secure **Spring Boot** REST endpoints in **Java** handling FIR submission, status updates, and case retrieval with proper request validation and error handling.
- Implemented **JWT**-based authentication and role-based access control, enforcing separate permission levels for citizens, police officers, and administrators.
- Structured a normalized **MySQL** schema covering FIR records, case history, and user accounts, with indexed queries for fast lookups on case ID and status filters.

E-Commerce Web Application

2024

React.js, JavaScript, HTML5, CSS3, MongoDB

- Delivered a full-featured shopping interface with product listing, keyword search, category filtering, and cart management using **React.js** and modular component design.
- Managed application state and user interactions entirely on the frontend using **JavaScript** and React hooks, ensuring smooth and responsive browsing behavior.
- Achieved cross-device compatibility through **HTML5** and **CSS3** responsive layouts, tested across mobile, tablet, and desktop viewports.
- Stored and retrieved product catalogue, inventory, and user cart data using **MongoDB**, leveraging its flexible document model for dynamic product attributes and nested order structures.

EDUCATION

B.Tech — Computer Science & IT

C.V. Raman Global University

Bhubaneswar

2022 – 2025

CGPA: 8.06 / 10.0

Diploma — Computer Science Engg.

Arka Jain University, Jamshedpur

2019 – 2022

CGPA: 8.95 / 10.0

TECHNICAL SKILLS

Languages:

JavaScript (ES6+), Java, SQL, HTML5, CSS3

Frontend:

React.js, Responsive Web Design, Bootstrap, Component Architecture

Backend & APIs:

Node.js, Spring Boot, REST API Design, JWT Authentication

Database:

MySQL, Relational Schema Design, CRUD Optimization

Tools & Platforms:

Git, GitHub, AWS S3, AWS Lambda, VS Code, Postman

Core CS Concepts:

OOP, DBMS, Operating Systems, Computer Networks

ACHIEVEMENTS

Research Publication at NIT Rourkela — CoCoLe 2025

Authored and published peer-reviewed research on Coverless Image Steganography. The paper presents a feature-based encoding method using SIFT and ORB descriptors that resists common steganalysis attacks without altering pixel values.

CERTIFICATIONS

- Full-Stack MERN Development
- Java Programming (Core & Advanced)
- React.js — Component-Driven UI
- AWS Cloud Practitioner Essentials

KEY STRENGTHS

- Strong grasp of component-based UI architecture and state management patterns in React.js
- Experience designing and consuming REST APIs across the full request-response cycle
- Comfortable working across the stack from database schema to deployed frontend
- Attention to cross-browser compatibility, accessibility, and performance optimization
- Collaborative mindset with hands-on experience in agile, Git-based team workflows
